

React developer assignment

Implement expression evaluator given on beneath screens using Create React App and (optionally) Material UI or other UI lib.

Screen 1 is used to set first operand of the expression.

Screen 2 is not shown because it looks pretty much like screen 3

Screen 3.

First operand takes first place, behind it operators follow their operands.

Add support for the following operators: +, -, *, /

Deployment instructions.

1. Push your code to public Github repo.
2. Deploy app to Zeit Now cloud.

Bonus question — what is the common name of this notation?

Expression Evaluator
